Start of Commitment	2013-08-20
End of Commitment	2015-09-30
Currency	EUR
Status	OECD approved

Description

Development problem - In line with the priorities of the 2013 National Programme of Official Aid of Slovakia, the project addresses the situation on the isolated Rusinga Island in Lake Victoria in Kenya. The island is strongly affected by the presence of TB, malaria, typhoid fever and other diseases, in particular HIV / AIDS. As a result of HIV, malnutrition, poor hygiene, morbidity and lack of medical care, the island has one of the highest mortality rates in infancy, childhood and adulthood, both in Kenya and in the world, and therefore a large number of orphans living without any care. Health care is not accessible to people for both financial and geographical reasons. Project objectives - Sustainable development, improving the health and quality of life of the local population, and socio-economic development of the area. The project is aimed at removing long-term causes, not at short-term improvement. The aim of the project is to continue the work of the already-built health center, to provide basic and professionally qualified health care and health education to the population, particularly in the areas of Kamasengre West, East and Kamasengre Kaswanga, with special emphasis on the extension of preventive examinations for schools, providing TB treatment, ARV therapy and vaccination for children. Local staff, working from clinics, which opened in 2010 under the guidance of doctors from the EU, will gradually be able to train and prepare for independent operation from October 2013. The target group consists of about 10,000 people, who make up about 50% of the total population of the island. Special emphasis is placed on children, mothers and patients with HIV / AIDS or TB. Another objective of the project is to increase the economic and food self-sufficiency of a multi-use community center, including the health center, kindergarten and elementary school, orphanage and dining room for 210 children daily. This we ensure by supporting agriculture and farming - the establishment of a 32-hectare farm that will: grow corn and beans, have 400 chickens, as well as fruit trees planted. 50% of production is for their own use. 50% will be offered for sale, thereby promoting the sustainability of the operation of the health center and reducing the high level of its
