## BILATERAL AID

### Construction of Sustainable Waste Water Treatment System in the part of Bucovat municipality

#### General Information

<b>Funding entity</b>	<b>Slovak Aid</b>
Recipient Country	Moldova
Implementing Organization	DEKONTA Slovensko, spol. s r.o.
Implementing Organization Code	Other
Geo Location	Bucovăț, MD
Longitude	28.45694
Latitude	47.18861
Start of Commitment	2015-10-20
End of Commitment	2017-02-28
Currency	EUR
Status	OECD approved

#### Description

The overall goal of the submitted project is to improve the quality of life of the inhabitants of the municipality Bucovat. The project solves the problem of wastewater management and its impact to the environment of the site. Project issue is possible to divide into two thematic issues. The issue of improving the quality of local citizen life is based on an achievement of basic requirements of local citizens. The basic human requirements include the availability of clean drinking water. Uncontrolled release of wastewater into the environment causes the significant pollution of groundwater as well as the surface water. The water is becoming a medium, spreading the pollution not only to the surface water but also to the underground. Subsequent re-pumping of contaminated groundwater and its use for drinking (or even watering gardens) could cause serious health problems to the local inhabitants. Moldovan government classified the water supply protection and development of water and sewer infrastructure for the top of their priorities. Its goal is to gradually increase the proportion of the population with the access to water and sewerage infrastructure. Following the priorities of the Government of Moldova and Medium-term strategy for development cooperation of the Slovak Republic for the years 2014-2018 include the Republic of Moldova and its people among the target groups of Slovak foreign development cooperation. Specific development aid of the proposed project consists of fulfilling two specific objectives of the project. The first one is to reduce the negative impact of produced wastewater on the environment and health of the population of the Bucovat municipality and the surrounding areas. Concentration of produced waste water into sewerage would eliminate the negative impact of faecal pollution emitted from waste water flowing freely at surface to on the surrounding environment. The estimated impact on the health of the population is expected in the longer term period. . Building a sustainable system of waste water treatment (second specific aim of the project) would ensure the cleaning of waste water. Water flowing from the wastewater treatment plant will be free of major pollutants and thus would not pose a risk to

Commitments and Amount Extended (EUR)

Reporting Year	Commitments	Amount Extended
2015	93 905 €	0 €
2016	0 €	25 960 €
