Longitude	28.58333
Latitude	47.25
Start of Commitment	2017-09-12
End of Commitment	2019-05-31
Currency	EUR
Status	OECD approved

Description

Access to information and public supervision are essential prerequisites for improving the efficiency of state administration and self-government and the engagement of civil society. Poor awareness of regional and municipal policies hampers public policy control. The same applies in relation to enterprises established by the state or by self-government. Unless these entities are sufficiently transparent, the public can not sufficiently assess the effectiveness of their operation and cannot oversee the links between these businesses and politicians, which again creates a space for waste, clientelism and corruption. The lack of information on financial stability and transparency of self-government regions open the door to irresponsible debt and inappropriate spending. The aim of this project is to improve the efficiency of the state administration, self-government and civil society in the area of creation and control of regional policies, administration of state-owned enterprises, and monitoring of budgets and information openness of municipalities. The applicant wants to achieve this by transferring know-how from unique and highly-rated projects implemented in Slovakia. The applicant wants to build on previous activities implemented in Moldova with the support of SlovakAid and the US Embassy in Chisinau. Specific goals and activities: 1) Improving the quality of regional regulation and legislation through a regular expert assessment of the impacts of regional socio-economic measures - the applicant's local partner will monitor regional measures taken by local authorities; The selected key actions will be thoroughly analyzed and submitted to the panel of independent experts; The results of the evaluation will be made public. 2) Improving public control over the functioning of state-owned enterprises through an evaluation of the information openness of state-owned enterprises - the applicant and the partner will analyze how the top 50 state-owned companies report on their activities and will create an interactive portal with results for individual businesses. 3) Improving financial stability of state-owned enterprises through financial analysis tools - Applicant and Partner will analyze financial indicators of 50 top public
