BILATERAL AID

Construction of the potable water wells for the town of Bozan

General Information

Funding entity	Slovak Aid
Recipient Country	Iraq
Implementing Organization	Slovenská katolícka charita
Implementing Organization Code	Other public entities in donor country
Geo Location	Bozān, IR
Longitude	46.6935
Latitude	35.3088
Start of Commitment	2018-09-21
End of Commitment	2019-09-30
Currency	EUR
Status	OECD approved

Description

The project of building four wells in the town of Bozan reflects an acute need to provide a potable water for 1,980 families of the original inhabitants of the town together with another 400 families of IDPs, who escaped from the Sinjar Region because of the armed conflict which started in 2014. Three wells, which already exists in the town were constructed in 1980 and since the town had only a half of its current population, their production was sufficient. Nowadays the two out of three wells are very old and the third does not function at all. The two functioning well are able to provide potable water at maximum for half of the town's population and they can operate only when there is an electricity in public grid - which works approx. 6 - 9 hours per day. Because of the previous armed conflict, which officially ended only in December 2017, neither the local government nor the town itself does not have a funds for the (re)construction of the wells. The realization of the project foresees the construction of three new wells and the reconstruction of one old, which does not function. Two wells will be connected to the already existing water tank which already provides the potable water to the town water distribution network. Another two wells will be also connected to the new water tank which will be constructed by another project and subsequently it will be connected to the town water distribution grid. The project will therefore exclude the lack of the potable water which in combination with the high temperatures, which in this region of Iraq reach even 50 °C, present serious danger for life of local inhabitants and also a high risk for contagious diseases caused by a low hygiene. Moreover the sufficiency of the potable water will support the local inhabitants in the cattle breeding and the agriculture, which will reinforce the cohesion between the local original inhabitants and the IDPs families.

Commitments and Amount Extended (EUR)

Reporting Year	Commitments	Amount Extended
2018	200 000 €	160 000 €
2019	0 €	40 000 €
Total	200 000 €	200 000 €

Sectors share

Sector name	Share
Basic drinking water supply	100.0 %
