## BILATERAL AID

### supporting renewable energy education at Kabul University

#### General Information

Funding entity	Slovak Aid
Recipient Country	Afghanistan
Implementing Organization	Slovenská Technická Univerzita v Bratislave
Implementing Organization Code	University, college or other teaching institution, research institute or think-tank
Geo Location	Kabul, AF
Longitude	69.17233
Latitude	34.52813
Start of Commitment	2019-08-26
End of Commitment	2021-07-26
Currency	EUR
Status	OECD approved

#### Description

The training of professionals for energy sector, in particular the use of renewable energy is of paramount importance for development and stability in Afghanistan. As in other sectors, there is a strong demand for education in Afghanistan in the energy sector as well. However, the quality of education in this country is greatly influenced by the lack of qualified professionals, technical facilities, non-standard study programs and non-standard scientific and research activities. The aim of this project is to promote the quality of education in Afghanistan with an emphasis on higher and vocational training. The project aims to support the training of university faculty staff in the field of renewable energy sources through technical equipment, development of human potential, building and establishing cooperation between Slovak and Afghan institutions, transferring knowledge and know-how from Slovakia and organizing a scientific conference. The implementation of the project will create a modern equipped laboratory focused on the training of university graduates in the field of solar systems together with trained personnel in the field. Higher education teachers will be trained to integrate lessons learned and laboratory equipment into the study curriculum of renewable energy, ensuring the project's sustainable impact on the quality of education in the field. In addition to directly trained university teachers, more than 200 other people will receive non-formal education during the project. The implementation of this project will significantly contribute to improving the knowledge and skills of teachers, students and graduates of Afghan universities and will bring a number of social, economic and environmental benefits to different parts of society.
